1. Introduction

This project is a testing exercise from the ITF Manual Testing course. I tested the Student Registration Form from the DemoQA website: https://demoqa.com/automation-practice-form/

I started from the client requirements. I wrote 50 test cases in JIRA and Zephyr Squad and executed them. For each failed test, I reported a bug in JIRA.

2. Requirements

The requirements were written as a user story: “As a student I want to submit a registration form”.

USER STORY: As a student I want to submit a registration form

Client Requirements:
- Mandatory fields: ‘First Name’ and ‘Last Name’, ‘Email’, ‘Mobile’
- ‘First Name’ and ‘Last Name’ are input fields accepts maximum of 30 characters length, only alphabetical;
- ‘Email’ is an input field that should have email validation, text that is not in email format should not be accepted;
- ‘Mobile’ is an input field: alphabetical characters are not accepted and it must have exactly 9 digits
- ‘Gender’ field with radio button options: Male, Female
- ‘Date of Birth’ is an input field that has the format DD/MM/YYYY
- ‘Choose file’ upload section is available. Only images of .png and .jpg can be uploaded
- ‘Submit’ button is enabled when all mandatory fields are filled in

SUT: https://demoqa.com/automation-practice-form/

Figure 1: User story and client requirements

Field	Requirement
First Name, Last Name	Mandatory, maximum 30 characters, only alphabetical
Email	Mandatory, must be in email format
Mobile	Mandatory, only digits, exactly 9 digits
Gender	Radio buttons: Male, Female
Date of Birth	Format DD/MM/YYYY
Choose File	Only .png and .jpg images
Submit	Enabled when all mandatory fields are filled in

3. Test Design

3.1 Test cases by area

I created 50 test cases in JIRA (VALI-34 to VALI-90) and linked them to the user story VALI-33. I added the steps and the expected results in Zephyr Squad. All the test cases have Medium priority.

To design the test cases, I used boundary values and valid and invalid inputs. For example, I tested the name fields with 30 and 31 characters, and the Mobile field with 8, 9 and 10 digits.

Area	Tests	What I verified
Layout and GUI	7	Position of the form, alignment, list of fields, Tab and Enter navigation, mandatory field marks
Mandatory fields and submitting	8	Each mandatory field, submitting with and without optional fields
First Name and Last Name	4	Uppercase and lowercase, 30 and 31 characters, only letters
Email	5	Email format, inline validation, Yahoo and Gmail addresses
Mobile	4	8, 9 and 10 digits, only digits
Gender	4	Male and Female options, one option at a time
Date of Birth	4	Format, future dates, invalid day and month
Choose File	6	.png and .jpg images, other files, more images, delete and view
Submit button	5	Enabled and disabled state of the button
Saved data	3	All fields completed, form saved in a list, data saved correctly

3.2 Example test case

VALI-41: Verify that First Name is mandatory field

#	Test step	Expected result
1	Log into the application	User is logged into the application
2	Go to the Forms > Practice Form	Student Registration Form is opened
3	Fill in all the mandatory fields, except First Name field	First Name field is empty, all other mandatory fields are completed
4	Press Enter to submit the form	The form isn't submitted, the mandatory First Name field needs to be completed

4. Test Execution

4.1 Results

I executed all 50 test cases in the test cycle "Run test for Submit a registration form", between 12 and 14 March 2022. For each test, I marked every step as PASS or FAIL. When a step failed, I reported a bug and linked it to the execution.

Result	Number of tests
PASS	24
FAIL	26
Total	50

Area	PASS	FAIL
Layout and GUI	4	3
Mandatory fields and submitting	5	3
First Name and Last Name	2	2
Email	4	1
Mobile	2	2
Gender	3	1
Date of Birth	0	4
Choose File	3	3
Submit button	0	5
Saved data	1	2

4.2 Examples

VALI-41 (PASS): I left the First Name field empty and pressed Enter. The form wasn't submitted, as expected.

VALI-56 (FAIL): I filled in the Mobile field with 9 digits and pressed Enter. The form wasn't submitted and an error was shown. According to the requirements, 9 digits must be accepted. I reported bug VALI-94.

The complete test cases with steps and execution results can be checked in the project repository (Student_Registration_Form_TEST_CASES_EXECUTION.pdf).

5. Bugs Reported

5.1 Bug summary

I reported 19 bugs. All of them have Medium priority and the status "Selected for Development".

Bug	Title
VALI-84	The lower part of the form is not accessible on the web page
VALI-85	Mandatory fields aren't marked * against the field
VALI-86	Email field isn't a mandatory field
VALI-87	Optional Subjects field doesn't keep the text written after moving to another field
VALI-88	Submit button isn't working
VALI-91	First Name and Last Name input fields accept more than 30 alphabetical characters
VALI-92	First Name and Last Name input fields accept characters other than letters
VALI-93	Email address isn't colored
VALI-94	Mobile input field doesn't accept 9 digits
VALI-95	Mobile input field accepts 10 digits
VALI-96	Male and Female aren't the only radio button options for Gender field
VALI-97	Date of Birth format is incorrectly implemented
VALI-98	A Date of Birth greater than the current date is accepted
VALI-99	Date of Birth input field accepts a date with an invalid day
VALI-100	Date of Birth input field accepts a date with an invalid month
VALI-101	Choose File upload section accepts files other than .png and .jpg images
VALI-102	Only one image can be uploaded in Choose File upload section
VALI-103	An uploaded image can't be viewed
VALI-104	The submitted form isn't saved in a list

One bug affected several tests. VALI-84 is linked to 8 failed tests. Because the lower part of the form was not accessible, the tests for the form layout and the Submit button failed too.

5.2 Example bug report

Field	VALI-91
Title	First Name and Last Name input fields accept more than 30 alphabetical characters
Type / Priority	Bug / Medium
Steps to reproduce	1. Log into the application. 2. Go to Forms > Practice Form > Student Registration Form. 3. Fill the First Name field with 31 alphabetical characters. 4. Fill the Last Name field with 31 alphabetical characters. 5. Fill in the rest of the mandatory fields. 6. Press Enter.
Expected result	The form isn't submitted, an error is shown.
Actual result	The form is submitted successfully.
Linked test	VALI-49

The complete bug reports can be checked in the project repository (Student_Registration_Form_BUGS.pdf).

6. Conclusion

In this exercise, I tested a registration form starting from the client requirements. I wrote and executed 50 test cases. 24 tests passed and 26 failed. I reported 19 bugs and linked each of them to the failed tests.

Most bugs are related to field validation: the name fields, the Mobile field, the Date of Birth field and the file upload. This exercise helped me practise the complete flow: from requirements to test cases, execution and bug reports.
