1. Introduction

This project is an exploratory testing exercise from the ITF Manual Testing course. I tested the website AcademyBugs.com. The goal was to find as many bugs as possible and report them in JIRA.

AcademyBugs.com is a demo e-commerce website. It was created for practising bug finding and bug reporting.

2. Application Under Test

Item	Details
Application	AcademyBugs.com
URL	https://academybugs.com/
Section tested	Find Bugs (product list, product details, cart, checkout, comments)
Testing type	Exploratory testing
Bug tracking	JIRA

3. Testing Approach

I used exploratory testing. I didn't write test cases in advance. Instead, I explored the website and checked how each function worked.

I followed the main flows a user goes through:

- opening a product and reading its details;
- changing the currency;
- filtering products by price;
- changing the number of results shown;
- adding a product to the cart and going to checkout;
- posting a comment;
- sharing a product on Twitter;
- signing in from the bottom of the page.

I also checked the layout of the pages: alignment, spacing and overlapping elements.

For each problem found, I created a bug in JIRA. I created a story called "AcademyBugs.com" (VALI-113) and linked all the bugs to it. In this way, all the bugs of the exercise are grouped in one place. At the end, I exported the bugs to a PDF report.

4. Bugs Reported

4.1 Bug summary

I reported 10 bugs: 2 with High priority and 8 with Medium priority. All of them have the status Backlog.

Bug	Title	Priority
VALI-105	The page freezes when changing the currency	High
VALI-106	The short description and description of the product are not in English	Medium
VALI-107	The page becomes unresponsive when clicking on Post Comment button	High

Bug	Title	Priority
VALI-108	The Filter By Price doesn't work in product details page	Medium
VALI-109	The Twitter share button in the product details page is broken	Medium
VALI-110	Item images have unnecessary space underneath	Medium
VALI-111	Sign In button overlaps the footer	Medium
VALI-112	There is a big space before the last letter in Return to Store	Medium
VALI-114	Sign In button is misaligned vertically	Medium
VALI-115	The page becomes unresponsive when clicking on the numbers of results	Medium

4.2 Bugs by category

I grouped the bugs into three categories:

Category	Bugs	Description
Functional	VALI-105, VALI-107, VALI-108, VALI-109, VALI-115	A function doesn't work: the page freezes, the filter doesn't apply, a button opens an error page.
Content	VALI-106	The product text is not in the expected language.
UI / Layout	VALI-110, VALI-111, VALI-112, VALI-114	Visual problems: extra spacing, overlapping or misaligned elements.

I assigned High priority to the two bugs that block the user completely: the page freezes and the user can't continue. The other bugs got Medium priority.

4.3 Example bug reports

Each bug report contains the steps to reproduce, the expected result, the actual result and the priority. Below are two examples.

Field	VALI-105
Title	The page freezes when changing the currency
Type / Priority	Bug / High
Steps to reproduce	1. Open the website. 2. Go to Find Bugs module. 3. Open a product. 4. Change the currency from the Select a currency dropdown.
Expected result	The currency is changed.
Actual result	The page freezes when changing the currency.

Field	VALI-111
Title	Sign In button overlaps the footer
Type / Priority	Bug / Medium
Steps to reproduce	1. Open the website. 2. Go to Find Bugs module. 3. Open a product. 4. Check the Sign In button at the bottom of the page.
Expected result	The Sign In button is above the footer.
Actual result	The Sign In button overlaps the footer.

The complete bug reports can be checked in the project repository (AcademyBugs_Report.pdf).

5. Conclusion

During this exercise, I explored the Find Bugs section of AcademyBugs.com and reported 10 bugs in JIRA. Five bugs are functional, one is related to content and four are related to the layout.

This exercise helped me practise exploratory testing. I also practised writing clear bug reports, with steps to reproduce, expected and actual results, and a priority for each bug.
